Game Title – Elemental Quest

Elemental Quest is a 2D puzzle adventure game in which you can play as Ember (the fire character) or Aqua (the water character). Players can choose each character as they please or even switch at any moment to use their special elemental abilities to transform and overcome puzzles to be able to complete each level and bring balance back to a world on the brink of total destruction by an evil force.

You start the game from a specific start point and have to move through the elemental realms, gathering prizes (defeating enemies and hazards) and avoiding obstacles (or hazards) to reach the finish line. To complete objectives, you must switch between Ember and Aqua and use their fire and water abilities to stop moving enemies, flowing water, and Java (the content or character) enemies. You must collect everything and bring balance back to the elemental world, before the clock runs out and you lose balance/elements or you lose life from the elemental enemies.

Main characters (Elemental Spirits):

- Ember: A fiery spirit that can light torches, burn obstacles, melt icy paths, and create fire platforms.
- Aqua: A watery spirit that can extinguish flames, cool down lava and manipulate water to form paths.

Rewards:

- Elemental Crystals: These are scattered across map. The player is required to collect all the gems to unlock the exit gate.
- Golden Gems: These appear randomly and vanish after a few ticks. These provide extra points.

Enemies:

- Shadow Sentinels: These enemies move and protect certain areas of the map that the player has to defeat adding layer of difficulty.
- Hazards: Players will face lava and water hazards which will adjust their score. Water will penalize Ember and Lava will penalize Aqua.

Level Design and Difficulty:

Every level in the game has its own set of risks and challenges. Players have to cross other challenges which include a flooded zone, barriers that trap players in fires, and barriers that freeze players. The player will face a variety of challenges that include different enemies at each stage that will have to be battled. All of this must be done while managing the increasing difficulty of the levels.

Game Modes:

The player can switch between Ember and Aqua to solve puzzles and challenges in each level.

Additional Implementations:

- 1) **New Elements** (Future Expansion): Earth and Air: New elemental characters may be added in the future updates of the game.
- 2) **Challenge Mode**: Challenge mode will allow players to select a level of their choice and try to get the highest score and the fastest time on the leaderboard.
